Report on Malaria Deaths in Africa: 2000-2014 By He Wang

Most Malaria death cases happened in the middle of Africa, and the worst four countries in the middle are Kenya, Congo, Angola and Tanzania. By clicking each country on these countries, Kenya lost the most people each year. 27,896 people died due to Malaria. The next most is Congo, with 15,203 people died, next is Tanzania with 11,201 people and Angola with 11,469 died.

The least of death cases due to Malaria happened in the north of Africa. The countries are Egypt and Algeria. From 2000 to 2014, by selecting each country, Egypt had an average of 2 cases per year due to Malaria and Algeria had an average of 1 death per year due to Malaria.

How have the number of malaria deaths changed over time in **Kenya**?

By selecting Kenya map, the chart shows the Malaria death numbers in Kenya for each year from 2000 to 2014.

The year 2000 to 2003 were very tough four years for the country of Kenya. The death due to Malaria remained high between 45k to 50k, although there was a slightly down trend in the year 2001 and 2002, in 2003, the Malaria death took more than 50k of the lives away and the number was the highest in Kenya's Malaria death history.

In the years 2004 to 2010, the death numbers fluctuated dramatically. In the year 2004, the Malaria death was lowered down to around 25k, almost half of the peak time and the next two years 2005 and 2006 the numbers quickly climbed to around 45k and then to approximately 40k.

The number of death due to Malaria in 2010 was close to the year 2004.

The rest years from 2011 to 2014, the situation was getting much better with average yearly death numbers are all bellowed than Africa average. It seems that Malaria deaths were got controlled.

Africa has four island countries that had Malaria Death records from the year 2000 to 2014 based on this Africa map. By selecting all islands, they are Cabo Verde, Sao Tome and Principe, Comoros and Madagascar. When I select each island and view the number, the yearly average death number due to Malaria for each country was 2, 93, 35 and 552. Madagascar had the highest Malaria death number and Cabo Verde had the lowest Malaria death number. The country average numbers of Malaria death of all four island countries were well below than the African countries' average. This might be because that these island countries are fairly geometrically isolated.
